SOFT-FRUIT SUBSTRATES

Blueberry Kits & Mixes

01

Blueberries, one of the most popular soft fruits, are increasingly grown in substrates rather than soil. Beyond the usual benefits of fewer soil-borne pests and diseases and control over aeration, moisture, and nutrition, soil conditions in most blueberry regions are simply not ideal for the plant.

02

Most of the growers found an ideal substrate in coconut coir (a mixture of cocopeat and coconut husk chips) due to its ability to manage the draining and better root development.

03

Cocowide has come up with a range of kits and blocks for blueberry farming depending on whether the product goes directly to the farms or further processing by manufacturers of substrate mixes.
